

Alloy Machined Side-Eject Tine with Carbide Tip - .500MT x 4.500L x .645OD R201680

Details

Manufactured from special high carbon alloy tubular steel with a precision machined slot in the side wall to allow for more efficient core removal in heavy soils. R&R's unique method of machining maintains the maximum side wall height for strength to avoid bending. These tines are through hardened to RC45-48 to create a much tougher and more wear resistant tine. A carbide tip is then added for even longer life. The advantage of using carbide tipped tines is the ability to maintain your maximum aerating depth consistently over the life of the tines.
